## Assessment

**Answer 1:** I have good knowledge about front-end technologies like HTML, CSS, javascripts . I have also used Bootstrap which is a most common css framework for building a stylist and responsive web page.

**Answer 2:** No, I am currently working as a backend developer (Nodejs) , And did not work on any of the above given framework but I worked on react which is a most used framework for single page websites.

**Answer 3:** As a frontend developer , HTML , CSS and javascript are the basic technologies and every frontend developer must have above skills. I will rate myself on the scale of 0-10 in **HTML (8)**, in **CSS (8)** and in **javascript (9.5)**.

**Answer 4:** Mostly I used the latest Google Chrome browser , so I did not face a lot issue but I heard about the Internet Explorer is the most obsolete browser and it was not updates from a long time so it does not support latest feature of modern technology like HTML5, CSS3 and ES6 .

Most of the Html elements already describe which browser version will support it.

For resolving the browser compatibility issue we can follow the below points.

- We can test our website on the latest and real browser.
- We can apply the Html and css validation so it will be helpful to understand the problem. For example, some browsers add an auto closing tag if it is not in the code.
- Always have a doctype HTML while writing code because if some browser will not support the HTML5 it will give an error.
- For developers it is most important for which browser they are writing code.

**Answer 5:** Yes , I have taken a full responsibility to deliver a project and successfully deliver it to the client.

**Answer 6:** Yes , for version control , I am familiar with GITLAB and GitHub.
